

CASE STUDY WITH **zendesk**

Zendesk Decreases RFP Response Time By 50%

Zendesk helps its 145,000 worldwide clients connect with their customers on any level, providing customer service solutions across phone, chat, email, social media, and any other channel. Smart self-service Q&A, live messaging and call center software are just some of their core offerings. With extremely fast growth – roughly 35% per year – the company had to scale quickly while streamlining its responses to requests for information (e.g. RFPs, security assessments). Each request was unique and information was siloed, so new hires couldn't get up to speed fast enough.

CHALLENGE

Departmentalized

Disconnected info sources had to be utilized separately for each response.

Time Intensive

The first step in any partnership is for Zendesk to confirm its high level of security, which is handled by third parties – adding yet another separate repository of critical information.

Highly Manual

Every request is inconsistent (different lengths, languages, formats), so team members had to handle each one manually, find siloed information, format and reformat, and so on.

SOLUTION

Centralized

All IT tools, all past and present documents, and all stock answers are all accessible in one place with no delays due to departmental siloes or third parties.

Streamlined

Security information can be formalized, stored, and confirmed instantly.

Global Resource

All responses are queued by department and topic, making the review process easier; and sales can automatically tap each department as needed to confirm their responses.

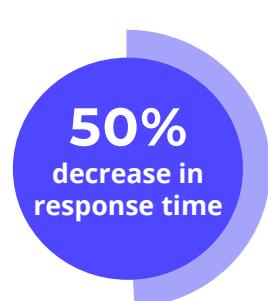

“

Using Ombud has undoubtedly had a significantly positive impact on the speed, quality, and effectiveness of our responses.

- Simon Miles
VP of EMEA Presales

RESULTS

Zendesk has streamlined and improved the sales cycle by making document creation easy and automated with Ombud. New hires can now complete requests in their first week of employment while tenured team members are focusing on closing deals rather than mundane administrative tasks.

One Week to Productivity

for new employees completing requests.

3x increase in win rates

year over year.

Half of the admin staff

required 50% of past content is used for future responses.
